**Lumon Lukio, Vantaa**  
August 2017 - December 2020

# About Me

## About Me

I'm a motivated young individual passionate about social impact. I thrive on learning fresh perspectives and tackling obstacles head-on. Building connections with others comes naturally to me. What truly ignites my enthusiasm is the practicality of programming and the vast world of computer science. I find joy in seeking out answers and addressing challenges. The opportunity to find solutions and resolve real-world problems is what excites me the most about this field.

## Hobbies & Projects

In my free time, I especially like to play sports and produce music. Currently, I am working as a **Project Manager** and as the **Marketing Manager** in my start-up and am eager to work on our ongoing projects. I have done multiple different side projects on my free time on which I have more information on the page below.

## About my Studies

I am a third-year information and software engineering student at the University of Jyväskylä. I'm completing my third academic year in Jaén, Spain until the end of May. Here I participate in courses from my exchange university and my home university. During the exchange, I have also worked on my startup company and worked on my free time projects. Student exchange has been a great opportunity for me to become international and make connections with people from all backgrounds.

# My Projects

## StudyTracker

- A database application for primary schools to create and conduct tests
- Built using MySQL & React for the UI

## TinkerIT CO-founder

- Customer oriented software company with a mission to enable websites and stores for all businesses
- I work as a Project Manager and as the Marketing Manager
- More about us at [www.tinkerit.fi](http://www.tinkerit.fi)
